

Part Number

41521 Pro Pulsion Road Pedal

Strength/Weight

Heat treatment reinforces strength and integrity to ensure a safe, reliable axle that withstands extreme amounts of force. The aluminum body allows this pedal to weigh in at 285 grams, approximately 30 grams lighter than Shimano PD-6700 Ultergra pedals. The large platform area provides stability and efficient power transmission like the Keo Classic but at **less half of the cost** and with a much stronger chromoly axle versus the steel axle of the Keo.

Features

- Black Finish
- Sealed Bearings
- Heat Treated Chromoly Axle
- Adjustable spring tension
- 9 Degree Float
- Look KEO Compatible
- Aluminum Body
- 285 Grams per pair
- 50mm center of platform to outer crankarm
